

Features/Functionality

The main features of the website include:

- Accounts: Users can create and manage accounts.
- Booking: Users can book appointments.
- Administrator Abilities: Admins can modify and add services, announcements, and operating hours.

Value Added

Through this project, I provided an upgraded solution to the client's old site. Now users have an easier time seeing operating hours, announcements, booking, and seeing services my client offers.

Basic Maintenance

Because of the way the website is designed, most of the maintenance can be done by my client easily inside the admin panel. However, there still is one large issue:

- Clearing out old orders/no-shows.

This could be a potential feature that is added later on, or something the client does every so often. The command for this is listed here:

```
DELETE FROM order_items
WHERE ORDER_ID IN (
  SELECT ORDER_ID FROM orders
  WHERE ORDER_STATUS = 'pending'
  AND CREATED_AT < NOW() - INTERVAL X DAY
);
```

```
DELETE FROM orders
WHERE ORDER_STATUS = 'pending'
AND CREATED_AT < NOW() - INTERVAL X DAY;
```

Where 'X' is how many days ago you want to start deleting the orders.

Some tutorials on executing SQL commands:

- <https://www.youtube.com/watch?v=iUYJ5UQ4Qgg>
- <https://www.youtube.com/watch?v=zQ2rlKoblIE> (CPanel specific) *Note: I did not give my client CPanel access, this is just an example video in case they use CPanel.

Lessons Learned

Some lessons I learned from this project were foundational front-end and back-end skills, integration of API and databases, and how to work effectively with a client. This project was very useful in helping me use and display the new languages introduced into this course, and presented fun challenges when working with the databases.

Future Improvements / Features to add

- Payment Processing (I did not have enough time to get to this!)
- Perhaps an API-integrated booking system.
 - I did not include this because things like Calendly do not make it easy to include things like the details of the appointment automatically without user input.
- Old order history purging
 - Honestly, I did not even think to include this feature. I only thought of it when brainstorming maintenance to add in; this should be easy enough of a feature to add in.
